

## Take matters into your own hands!

Each municipality or region in Bulgaria can increase its energy independence. We offer preparation of contemporary and modern development strategy to increase the energy independence of your municipality / region, such as:

*Community, with **reduced dependence** of energy supplies from outside, through the utilization of renewable energy sources and increasing the potential EE systems and buildings situated in its territory.*

## Stages of Implementation

- Evaluation of energy requirements - methods of data collection;
- Ways to better allocation of the required energy;
- Technical and ways of energy supply of a municipality (region), the potential for reducing CO<sub>2</sub>-emissions;
- Implementation plan for energy independence in your municipality (region);
- Alternatives for Municipal logistics;
- The role of a municipality (region) as an energy model;
- The role of municipalities (districts) to locate problems in the implementation of renewable technologies.

**Our common interest in sustainable economic development in a clean environment.**

## Best practices

- Strategy for utilization of renewable potential in the territory of Sofia Municipality;
- Plan for sustainable development of Smolyan region;
- Strategy and plan for the sustainable development of the municipality of Petrich;
- Energy plans of municipalities Sapareva Banya, Kyustendil, Kocherinovo and others.
